Origins and Geology of Cat's Eye T04 NED

Geological Formation

Cat's eye gemstones are usually composed of chrysoberyl, but can also include other minerals like tiger's eye, hawk's eye, or contemplative quartz. The formation of cat's eye minerals involves specific geological conditions:

- Mineral Composition: Chrysoberyl (CAl?O?) is the classic material for high-quality cat's eye

stones.

- Crystallization Process: Occurs in pegmatitic or alluvial deposits where mineral-rich fluids crystallize under high temperature and pressure.
- Inclusion Formation: The chatoyancy is caused by fine, parallel inclusions or fibrous structures within the mineral, such as rutile needles in chrysoberyl.

Geographical Origin

The T04 NED designation might indicate a specific mining region, which can influence the gemstone's characteristics:

- Sri Lanka: Known for producing high-quality chrysoberyl cat's eyes with superior chatoyancy.
- Brazil: Also a significant source, offering stones with unique colorations.
- India and Africa: Regions producing more affordable or treated variants.

Each origin imparts subtle differences in color, clarity, and chatoyancy, affecting their desirability and value.
