Answers and Solutions to Common Problems in Unit 4

Understanding Polynomial Functions

Most problems involve identifying the degree, leading coefficient, and zeros of polynomial functions. Here is a typical approach:

- Factor the polynomial completely to find zeros.
- Determine the degree and leading coefficient to analyze end behavior.
- Use synthetic or long division for polynomial division problems.
- Apply the Fundamental Theorem of Algebra to find all zeros, including complex roots.

Sample problem:

Find the zeros and end behavior of the polynomial $P(x) = 2x^4 - 3x^3 + x - 5$.

Answer:

- The degree is 4 (even), leading coefficient is 2 (positive), so as $x \to \pm \infty$, $P(x) \to \infty$.
- To find zeros, factor or use synthetic division:

(Assuming synthetic division with rational roots)

Possible rational roots are divisors of constant term -5 over divisors of leading coefficient 2: $\pm1, \pm5, \pm\frac{1}{2}, \pm\frac{5}{2}$.

- Test these values to find actual zeros, then factor accordingly.

Analyzing Rational Functions

Problems often involve identifying asymptotes and holes:

Key steps:

- Vertical asymptotes: Set denominator equal to zero and exclude any common factors with numerator.
- Horizontal/Oblique asymptotes:
- For horizontal, compare degrees of numerator and denominator.
- For oblique, perform polynomial division when numerator degree exceeds denominator degree by exactly 1.
- Holes: Simplify the rational expression; if a factor cancels, the point where that factor is zero is a hole.

Sample problem:

Determine the asymptotes of $R(x) = \frac{x^2 - 1}{x^2 - 4}$.

Answer:

- Factor numerator and denominator:

$R(x) = \frac{(x-1)(x+1)}{(x-2)(x+2)}$.

- Vertical asymptotes at $x=2$ and $x=-2$.
- Since degrees of numerator and denominator are equal (2), the horizontal asymptote is at $y = \frac{\text{leading coefficient of numerator}}{\text{leading coefficient of denominator}} = 1$.

Graphing Polynomial and Rational Functions

Graphing these functions involves multiple steps:

1. Find intercepts:

- x-intercepts: Set numerator equal to zero (for rational functions) or solve \(P(x) = 0 \) (for polynomials).
- y-intercept: Plug in \(x=0 \).

2. Determine end behavior:

Use the degree and leading coefficient.

3. Identify asymptotes:

As previously discussed, vertical, horizontal, or oblique asymptotes guide the shape of the graph.

4. Plot key points and asymptotes:

- Use test points in each region divided by asymptotes and zeros.
- Sketch the graph considering transformations such as shifts, stretches, and compressions.

Solving Polynomial and Rational Inequalities

Inequalities are often solved by:

- Rewriting the inequality as an equation equal to zero.
- Factoring the polynomial or rational expression.
- Finding critical points (zeros and undefined points).
- Using a sign chart to determine where the expression is positive or negative.
- Writing the solution interval based on the sign chart analysis.

Sample problem:

Solve \(\frac{x^2 - 4}{x - 1} > 0 \).

Answer:

- Factor numerator: \((x-2)(x+2) \).
- Critical points: \(x=-2, 1, 2 \).
- Test intervals: \((-\infty,-2)\), \((-2,1)\), \((1,2)\), \((2,\infty)\).
- Sign analysis yields the solution:

$x \in (-\infty,-2) \cup (2,\infty)$, excluding $x=1$ (where the expression is undefined).

Tips for Mastering Unit 4 Concepts

- Practice factoring polynomials thoroughly, including synthetic division and the Rational Root Theorem.
- Familiarize yourself with asymptote rules and their graphical implications.
- Use graphing calculators or software to visualize functions and verify your solutions.
- Solve a variety of problems involving inequalities to strengthen your understanding of sign analysis.
- Review key theorems such as the Fundamental Theorem of Algebra and properties of polynomial functions.
