The reaction releases energy, which can be harnessed for work, heating, or power generation.

2. Combustion Types

Combustion processes are classified based on how the fuel and oxidizer mix:

- **Complete Combustion**: Occurs when there is sufficient oxygen, producing maximum energy with minimal pollutants.
- **Incomplete Combustion**: Happens when oxygen is limited, producing carbon monoxide, soot, and other pollutants.
- **Pre-mixed Combustion**: Fuel and oxidizer are mixed before ignition, used in gas burners and engines.

- **Diffusion Combustion**: Fuel and oxidizer mix during the combustion process, typical in engines and furnaces.

3. Combustion Efficiency

Efficiency depends on how completely the fuel burns and how well the heat is transferred. Factors affecting efficiency include:

- Fuel type and quality
