- Contains the cylinders where combustion occurs.

2. Cylinder Heads

- Cover the engine block?s cylinders.
- Contain valves, spark plugs, and sometimes fuel injectors.
- Responsible for controlling air and fuel intake, as well as exhaust.

3. Intake Manifold

- Distributes the air (or air-fuel mixture) to the cylinders.
- Typically mounted atop the cylinder heads.
- In the Mercury Grand Marquis, often a plastic or aluminum component.

4. Fuel Injection System

- Delivers fuel into the combustion chambers.
- Includes fuel injectors, fuel rails, and associated sensors.
- Modern models use electronic fuel injection (EFI) for efficiency.

5. Ignition System

- Comprises spark plugs, ignition coils, and related wiring.
- Responsible for igniting the air-fuel mixture within the cylinders.

6. Cooling System

- Includes the radiator, water pump, thermostat, and hoses.

- The fuel injectors spray fuel into the intake manifold or directly into the combustion chambers, depending on the system.
- Sensors such as the Mass Air Flow (MAF) sensor monitor airflow for optimal fuel mixture.

2. Combustion Process

- The ignition system fires the spark plugs at the precise moment to ignite the air-fuel mixture.
- Combustion drives the pistons downward, converting chemical energy into mechanical work.
- The pistons are housed within cylinders in the engine block.

3. Power Transmission

- The movement of pistons turns the crankshaft.
- The crankshaft transmits rotational force to the transmission system.

4. Exhaust and Cooling

- Exhaust gases exit the cylinders via the exhaust manifold and are routed out of the vehicle.
- The cooling system circulates coolant through the engine block and cylinder heads, absorbing heat and dissipating it through the radiator.
